Exclusive AFFLINK Member Integrations

AFFLINK members using DDI's Inform ERP software solution gain tremendous advantages utilizing exclusive tools on reporting, web integration, product data import and more. If your company is not already utilizing these tools, it's time to take another look and see how these features will support your AFFLINK efforts.

Corporate Integration – Tightly integrated and fully automated, AFFLINK transactions occur in the background of your Inform ERP system.

- **Automated Reporting** - Includes purchasing, trace sales/rebate, & accounts payable EOM ('house' report)
- **Global Account Transactions** - Electronically send (EDI) customer purchase orders, acknowledgements, customer invoices, and vendor purchase orders.
- **Customer and Vendor Set Up** - Label as global account customers, preferred suppliers, web catalog users, and EC-Dox suppliers with ease.

Web Catalog Integration – Exclusive AFFLINK integration automatically exports product pricing and customer information from your Inform ERP system nightly, and receives web orders as they are placed.

AFFLINK Image Import – Easily import AFFLINK's images into your Inform system for viewing within the product overview pages. Product images are automatically synced and can be displayed on customizable pricing quotes and proposals.

GHX Integration – Addition to AFFLINK Corporate Integration
Designed for AFFLINK members, this tool allows Inform ERP to receive and automatically import orders from the GHX storefront.

> *DDI has kept us on the cutting edge with the AFFLINK integration.*
>
> *We used to process all of our orders up front – a million six a month manually. Now that we've streamlined that, about a million dollars drops directly into our system. So it eliminates operator error, and it makes it a lot easier on the customer service up front.*
